How to Install and Use the WordPress Messenger Plugin

The WordPress Messenger Plugin allows the registered WordPress users of a site to send private messages between the WP users. If you have a community site where you promote social interaction between the users then this plugin should be a nice addition.

WP Messenger Plugin Installation

Go to the "Add New" plugins screen in your WordPress admin area Click the "upload" tab Browse for the plugin file (wp-messenger.zip) Click "Install Now" and then activate the plugin

WP Messenger Plugin Usage

After you install the plugin, use one of the following shortcodes on a post, page or sidebar of your site to embed a messenger launch link

[wp_messenger_launch_link]

or

[wp_messenger_launch_link anchor="Your Custom Text"]

This will place a link that can be used to open the messenger window and registered WordPress users will be able to send private message to other users of the site.
